

Jeth Gomez

Wallingford, CT | (475) 343-1829
jeth.gomez@uconn.edu | linkedin.com/in/jeth-gomez

Technical Skills

Experienced: Python, C/C++, Robot Design, programming autonomous robot control

Familiar: Git, Java, C#, HTML, CSS, Neural Networks, CAD (Onshape, Solidworks), robotics motion planning

Education

University of Connecticut

Storrs, CT

Bachelor of Engineering Double Major: Computer Science and Engineering and Mechanical Engineering

May 2028

- GPA: 3.954/4.000
- Relevant Coursework: Data Structures, Object-Oriented Programming, Systems Programming, Cybersecurity, Discrete Systems, Applied Mechanics, Physics for Engineers, Thermodynamics
- Honors/Awards: Honors Program, Dean's List (Fall 2024-Fall 2026), Academic Excellence Scholarship

Experience

UConn Explore Engineering

Storrs, CT

Camp Counselor

January 2025 – July 2025

- Collaborated with 11 other counselors to design educational engineering activities geared towards high school students for a two-week summer program.
- Co-led an introductory python programming workshop, teaching fundamentals and guiding campers through a final project of their choice.
- Mentored 8 teams through the engineering design process to create a remotely operated underwater vehicle.

Personal Projects

UConn Schedule Builder

March 2025 – Present

- Developed a terminal-based schedule builder algorithm in C that scrapes course data via cURL, parses entries, and generates all valid schedules based on user-selected classes.
- Implemented data parsing, schedule generation, and constraint handling to efficiently produce conflict-free course combinations.
- Refactoring the project using Python, Rust, and TypeScript to be hosted on GitHub Pages so that users will have an easily accessible frontend.

Reboot Robotics

Expected launch: January 2026

- Initiating the creation of a student-led robotics club designed for alumni of FIRST Robotics programs to continue hands-on engineering and competition-style robotics projects in college.
- Developing the organizational structure, membership guidelines, and operational framework to ensure the club functions independently using only internally supplied materials and resources.
- Establishing an inventory management system for all robotics components, tools, and consumables to maintain availability, accountability, and efficient resource allocation.

Extracurricular Activities

First Tech Challenge (FTC)

Middletown, CT

Team Captain and Chief of Programming

September 2019 – May 2024

Programming Mentor

September 2024 – Present

- Led and managed 5 high school robotics teams (40 students total) as co-captain, coordinating registration, team assembly, and budgeting.
- Trained and mentored 8+ student programmers through workshops and one-on-one support, teaching Java for FTC robotics, improving team coding proficiency from beginner to competition-ready.
- Developed autonomous and teleoperated control systems as lead programmer in Java, using a motion-planning library, sensor data, and OpenCV, enabling the robot to execute tasks reliably in competition scenarios.
- Directed robot design and build strategy, making executive technical decisions and balancing programming with mechanical engineering considerations to optimize performance.

Frost Robotics

Storrs, CT

- Designing and building a “melty brain” combat robot utilizing an Arduino microcontroller for continuous spinning motion and navigation.
- Implementing control algorithms that integrate accelerometer data to achieve translational drift movement.
